

Cattle-fish farming

Dr. Md. Akhtar Hossain, Professor, Dept. of Fisheries, RU

- A cattle of 460 kg produces 13600 kg cowdung
- A pond fed with cowdung produces fish 2.2-3.5 times more than that of non-fed
- Flotation duration of cowdung is more than poultry droppings resulting some parts to be used as fish feed
- Less oxygen consumption than poultry droppings
- Two cattles are sufficient for management of 1 ha pond
